

FILLING, SEALING AND CAPPING SYSTEMS AND SERVICE IMS IS YOUR SINGLE SOURCE

for turnkey piston fillers, sealers and cappers. From high volume dairy foods to specialized pharmaceutical and household products, IMS offers the expertise, commitment, equipment and service that keep you up and running.

Increase your production and lower your costs in viscous filling and foil sealing capping.

Call IMS today!

Available in 14 and 24 Valve Configurations

VHS SERIES ROTARY PISTON FILLERS

The VHS Series of rotary piston fillers has achieved remarkable performance in "always on" production environments. Innovative yet straight-forward design, rugged stainless steel and urethane components and ease of operation make VHS Series the piston filler of choice for high volume, 24/7 filling viscous dairy, food, pharmaceutical and household products. Available in 14 valve and 24 valve configurations, hot and cold fill, with speeds up to 650 containers per minute.

HIGH SPEED CAPPING PRESSES

IMS high speed capping presses offer single, twin and triple tool versions providing outputs up to 700 bottles per minute (higher speeds available on request) and can produce caps with or without tabs in sizes up to 110 mm diameter. All presses are shaft driven or freestanding. Filler driven models are custom built to meet filler system requirements while freestanding models are mounted on a fabricated base alongside the filling line.

IMS Foil Capper

IMS OFFERS INDUCTION SEALERS

IMS induction sealers are designed for clean operation and high-speed sealing at a lower cost. Induction heating is extremely effective in hermetic sealing and is much more forgiving on misshapen container openings. These high-performance systems can seal aluminum foil caps with or without tabs on containers up to 110 mm in diameter, providing tamper evident sealing. Available stand-alone or integrated with your OEM or retrofit filler configuration.

VHS ROTARY DENESTER

The VHS Rotary Denester is an integral component of the VHS Rotary Piston Filling System. Compact and efficient, the VHS Rotary denester is engineered for high-volume production environments. The addition of the rotary denester to your infeed system will result in positive container denesting, handling and subsequent filling.

Rotary Denester

SERVICE AND SALES SUPPORT

As a leader in foil sealing and capping technology, IMS offers responsive service, world-class customer support and flexibility in customizing a preventative maintenance program to meet your specific needs. Rely on IMS for:

- Prompt, routine service
- Emergency 24-hour service
- Extensive parts inventory for IMS, Fords and other systems
- System repair, upgrade and retro-fit
- In-house engineering services
- Electrical programming
- Tool changeover
- Equipment installation, start up and trial run
- Foil testing service
- Training

PREVENTATIVE MAINTENANCE SERVICE AGREEMENTS

are available to all IMS customers with a 10% discount advantage on parts and service!
